PROFILE

Live stream producer who takes over the entire technical side of a show so hosts can focus on their audience. Runs multi-guest shows with up to six remote guests who join from a phone or laptop with just a link — switched live in OBS or vMix alongside screen shares, videos and memes on cue, streamed to several platforms at once, and recorded guest by guest on isolated tracks for editing. Also designs and automates OBS setups for solo streamers, and builds custom plugins, overlays and control decks when off-the-shelf tools fall short.

CORE SKILLS

Live production	Producing · technical direction · run of show · rehearsals · live switching · Q&A and chat moderation
Remote guests	Up to 6 guests via VDO.Ninja (phone or laptop, no install) · Riverside.fm · Zoom · screen sharing
Streaming	Multistreaming to YouTube, Facebook, LinkedIn, Twitch and more · RTMP · encoder tuning
Recording & post	ISO recording, separate video and audio per guest · DaVinci Resolve · Shorts, Reels and TikTok
Graphics	Branded overlays · lower thirds · on-screen chat (Social Stream Ninja) · live tickers · meme triggers
Setup & automation	OBS scene design · Bitfocus Companion · Voicemeeter routing · NDI · mic noise and echo cleanup

EXPERIENCE

Freelance Live Stream Producer & OBS Engineer

Upwork · Remote

Top Rated · 100% Job Success · 50+ jobs · 480+ hours

- Produce live streams, webinars, panel discussions and virtual events end to end: tech checks, rehearsals, on-air switching, and Q&A and chat moderation.
- Run multi-guest shows with up to six remote guests joining by link from phone or laptop; each lands in OBS or vMix as a clean source with its own mute, volume and layout.
- Stream to several platforms at once and record every guest on isolated video and audio tracks, delivering edit-ready files or finished episodes and shorts cut in DaVinci Resolve.
- Design turnkey OBS setups for solo streamers — scenes, audio routing, overlays and hotkeys — and automate repetitive show tasks with Bitfocus Companion.
- Built a live stock and crypto ticker overlay for a trading stream, controlled from a dock inside OBS.
- Keep a separate, portable OBS rig for every client, so one show's changes can never break another's.

SELECTED BUILDS

Director Deck	Self-hosted VDO.Ninja director view, cut from ~40 controls per guest to the few that matter live.
ControlDeck	Hotkey deck: Companion buttons plus a media grid that fires videos and memes into OBS or vMix.
ControlDeck Remote	Lets a remote co-host press the show's buttons over a keyed WebRTC link — no Companion access.
OBS plugins	Advance Stroke — gradient and liquid-glass strokes, glows and shadows for any source. Audio Clone — reuse one source's sound in any scene without its video.
OMT Screen Capture	Captures a display via DXGI and publishes it as a native-resolution network source for OBS and vMix.
